

01/07/2009**Aquila: the future is in high altitude**

The project "SHARE" of EvK2Cnr will contribute to the revitalization of the Italian city of Aquila, destined to become, in the near future, a crucial centre for research of high altitude . A weather station will be located at Gran Sasso Mountain to study the pollution and the atmosphere in the Mediterranean area and an international database for high altitude researches will be created. An agreement between the Italian research institute and University of Aquila, was reached today. [More ...](#)
